Mr. Gene Pabst
City of Springfield
1216 W. Nichols
Spfld, MO 65802

Dear Gene:

Per our conversations last week and this morning, I am requesting from you documentation of the types and amounts of chemicals that the City allows to be disposed of through the sewer system.

As we discussed, our laboratory disposes of only about a quart of 10 % Formalin per day. We follow the Formalin with copious amounts of water. Thank you for your phone reply this morning stating that our amount and method of disposal of our Formalin was within city guidelines.

Sincerely,

Angie Orth
Safety Officer
Pathology Services of Springfield, P.C.

Springfield, MO 65807

RE; Discharge of Formalin to the Sanitary Sewer.

Dear Ms. Orth:

This letter is in response to our conversation and your letter dated April 4, 1994. In your letter you requested that Pathology Services of Springfield be allowed to discharge approximately 1 quart of 10% Formalin to the sanitary sewer a day. As we discussed, it appears to be permissible for this type of discharge, at the stated volume, at this time. If in the future, if this discharge causes any problems whether it be odor, safety of maintenance workers, treatment, etc., this agreement may have to be changed.

Also, I am enclosing a copy of Chapter 30, Wastewater Regulations, of the Springfield City Code. This document regulates all discharges to the sanitary sewer. Pathology Services should especially be aware of Sections 30-23 and 30-24(a).

If you have any questions, please feel free to call at 864-1923.

Yours Truly,

Gene Pabst
Water Pollution Control Inspector
Surveillance and Enforcement

Enclosure: Chapter 30
